

CHENEGA CITADEL

THE POWER TO PROTECT

CHENEGA CITADEL

HOLISTIC SECURITY MANAGEMENT

Through a wide portfolio of strategic partnerships, Chenega International Consulting (CIC) offers an array of technologies and services ranging from open source intelligence analysis, specialist surveillance, and multiple surveillance feeds, integrated into a single command and control platform. Utilizing a stable of specialists drawn from the military and law enforcement sectors, CIC provides security and technical engineering consultancy so that together with our clients we can deliver risk mitigation solutions customized to prevailing threat environments and budgets.

MITIGATION OF THREATS INCLUDING

- Terrorist Attack
- Insider Action
- Criminality
- Spills and Fires
- Hostile Drones
- Cyber Attack

HIGH QUALITY, LOW RISK INFORMATION FOR:

- Search and Rescue
- Security Incidents
- Evacuation Scenarios

HSSE STRATEGY FOR OIL AND GAS

Is your worst-case incident scenario caused by a deliberate hostile action? As the sophistication of threats has increased so has the need to join security with process safety, oil spill and wider HSSE planning and strategies. Citadel offers the chance to get your design right, either from the start or by bringing together existing elements into a fully integrated solution. Create a tool which has all the security, emergency and other information your people need, when they need it, allowing people to remain in charge of the situation, being prepared for the worst and not being overwhelmed by technology.

Consultancy - Threats and Risks Linked to Major Hazards

With oil and gas facilities a potential target, security starts with a detailed threat analysis and the development of the measures required to mitigate them. Utilising our professional security and engineering expertise, Chenega International works with you to arrive at a bespoke security solution. Brought together under CITADEL, we will develop a product that matches both hazard, threat and budget.

Surveillance - Across the Spectrum; ATEX Equipment Where Needed

With our wide range of technology partners we offer surveillance capabilities across the electronic spectrum that includes open source media monitoring, legal intercept, 2D/3D recognition and a range of optical sensors, with ATEX rated cameras, UAVs and other devices available as required.

Information Analysis - Know Your Company's Social Media Attention

Our state of the art open source media monitoring and analytical capability has been developed using experienced military and law enforcement analysts. Chenega CITADEL clients can take advantage of our bespoke analytical services or product line to fulfil the critical information requirements of your oil and gas facilities

Command and Control Integration - Build your Common Operating Platform (COP)

To be effective in today's complex environment, decision makers demand an accurate real-time operating picture. Integrating multiple feeds onto a selection of Common Operating Platform (COP) tools we deliver a picture that is optimised for your decision-making needs for security and other operational and emergency incidents and responses

Accredited Training - Security professionals and Hostile Environments (HEAT)

Knowledge base investment is a key factor in enterprise success. Partnered with Ulster University, Chenega Europe offers a range of fully accredited higher education modules. Aimed at the professional, courses are currently offered in open source social media intelligence and the deep and dark web, with additional modules planned for cyber security and the legal and ethical aspects of social media monitoring.

Communications and Cyber Security - Network Security and Conformance to IEC 62443

The protection of an enterprise's information in today's high threat environment is an evolving challenge. We can help you meet this with an enterprise level capability to facilitate rapid post-attack remediation and enhanced network security and conformance to IEC 62443. Recognising that information needs to be shared whilst mobile, we offer a flexible, secure communications platform using military grade end to end encryption

Through-Life Services - Ongoing Maintenance and Support

Following consultancy, Chenega Europe has the capability to engineer, install, train and maintain the selected security solution so that it continues to operate at the required level of capability throughout its life.
