VEHICLE PROTECTION AND PROACTIVE MITIGATION

## THE THREAT OF VEHICLE COMPROMISE

Every day automotive security breaches and vehicle tampering occur throughout both developed and undeveloped nations around the world. Vehicle security threats have gone from film drama to a reality people have face on a daily basis. Throughout Europe and North America, tech-savvy thieves have stolen cars using nothing more than a computer and a wireless system to infiltrate the vehicle's security protections. In other parts of the world, vehicles are tampered with, trackers and explosive devices planted for information gathering and malicious intent. This is a reality the world faces.

## THE CHENEGA AND PRECIPIO SOLUTION

The Chenega/Precipio solution offers individuals peace of mind. Utilizing an internalized vehicle security system, Precipio guards any size vehicle from malicious intent through user notification and vehicle monitoring.

Chenega and Precipio possess extensive experience working with both commercial and governmental entities to implement security measures and perform threat assessments. Our unique capabilities and proven performance allow us to scale deployment and implementation to large-scale Corporate and Government entities, or to an individual user.

## PROACTIVE THREAT MITIGATION

When you park your vehicle and leave it unattended, Precipio will guard it for you. Simply activate Precipio with the supplied key fob and within seconds Precipio has taken technical details of your vehicle. If anyone places a bomb underneath your vehicle (or even a tracker) then Precipio will immediately inform the individual of the danger. Warnings will be given to the individual via text message and telephone calls. The system will even inform the user of the location of the foreign device.

## METHODOLOGY AND INSTALLATION

Precipio's main focus is user protection and peace of mind. Through consistent 24/7 vehicle monitoring and threat mitigation, individuals can feel confident that their vehicle is protected and safe from physical tamper.

### HOW IT WORKS

- Precipio has 12 sensor heads that are strategically placed inside the vehicle.
- Each head is a magnetic detection sensor.
- Anything magnetically attached to the vehicle will change the magnetic “shape” of the vehicle
- If the doors or boot are opened, this will also change the magnetic field of the vehicle.
- Any changes to the magnetic parameters of the vehicle will trigger an alert.
- An “in country” sim card is installed inside Precipio and is matched with the user/s mobile.
- Instructions on how to programme this sim card and the GSM module are included.
- You can have these texts and calls going to up to 5 users.
- Every time you activate Precipio it instantly runs a self diagnostic check on itself.

### INSTALLATION

- A competent auto electrician can do this job.
- Everything is installed inside the vehicle.
- The Precipio “black box” unit can be installed anywhere suitable inside that vehicle.
- Sensor installation works the same on both armored and unarmored vehicles.
- Installation takes between 2-3 hours.
- There is a 12 month warranty with Precipio and all parts.
- Precipio has tamper seals within all it's main enclosures.
